

ATS TURBO 2000

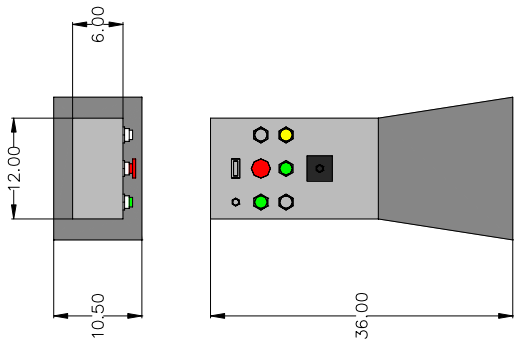

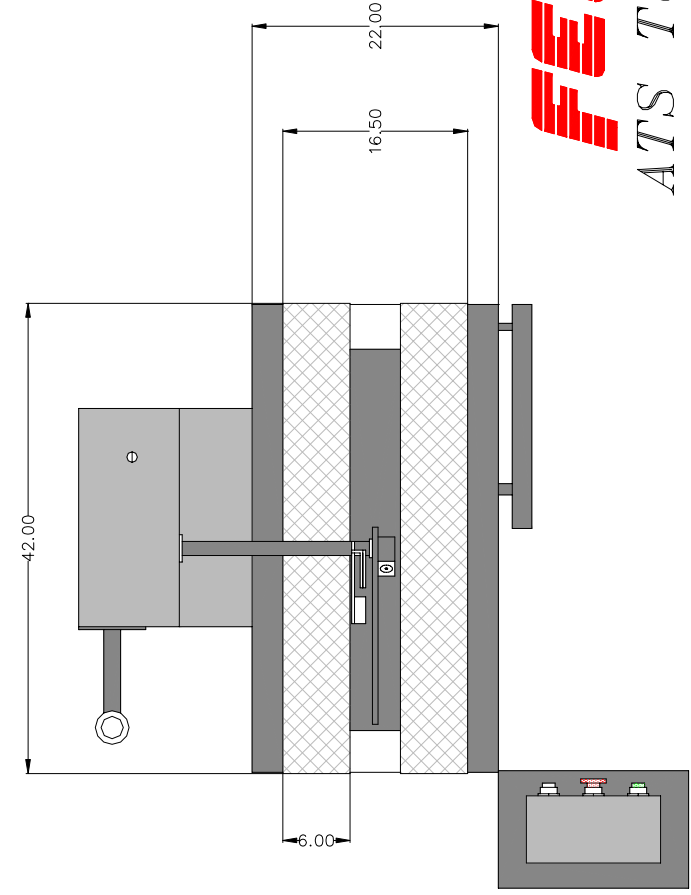

The Pak-Tyer Turbo 2000 is our most basic automated tying station. Integrating the cost and time efficiency of automation with our Series 2000 Pak-Tyer. The first step in automating your tying process.

The Turbo 2000 is a natural first step into automation for the growing volume of smaller facilities. The basic system incorporates our Series 2000 free standing tyer with a dual belt conveyor system, built to your specifications, allowing for faster bundle processing as a stand alone unit, or integration into an existing conveyor system. Either way, the Turbo 2000 provides the increased productivity and most effective advantages of automation – without sticker shock!
